

School of Computing "Can We Help You?" Tool

Students (and others) often are seeking help and information regarding our programs and services. In this project, the student will implement an interactive web page that determines what the user is in need of and will direct them to the correct person to help them solve their problem. If in need of an academic advising appointment, this system will allow the user to book an academic advising appointment with an advisor. The student will work with the QSC admin to determine the requirements for the project and will build a system to satisfy these needs.

ACM-W Celebrations Enrollment Tool

ACM-W Celebrations are conferences for Women in Computing that take place worldwide under the umbrella organization, the ACM-W. The ACM-W provides funding and support for these conferences. Currently conference registration and tracking is done via Google forms. This project will move the registration and tracking to an online system which will allow organizers to register their conference by providing the relevant information (organizer contact information, shipping addresses, how many attendees, location, url etc). Various reports will be generated from this information.
